SUMMARY

Backend Software Engineer specializing in multi-tenant platforms, workflow automation, backend architecture, database design, and scalable business applications.

SKILLS

Architecture & Design: Multi-Tenant Architecture, Database Design, Data Modeling, Workflow Automation, Business Process Analysis, RBAC

Backend & Databases: Node.js, Express.js, REST APIs, PostgreSQL, MongoDB, Sequelize ORM

Performance & Scalability: Redis, BullMQ, Query Optimization, Background Job Processing

Cloud & Integrations: AWS S3, AWS MediaConvert, Zoho Sign API, OAuth Authentication, Third-Party Integrations

WORK EXPERIENCE

Backend Software Engineer, Azentra Technologies June 2025 – Present

- Architect and develop multi-tenant business platforms supporting CRM, finance, utility brokerage, and debt recovery operations.
- Collaborate with stakeholders to translate complex operational requirements into production-ready software solutions.
- Lead backend development across integrations, APIs, authentication, background processing, and performance optimization.

Software Engineer Intern, FramboxxIT Pvt Ltd May 2024 – June 2025

- Developed business applications and REST APIs while contributing to backend systems, database operations, and workflow implementation across production projects.

PROJECTS

AMSL Broker Portal

- Sole backend engineer behind a multi-tenant utility brokerage platform comprising 260+ APIs, supplier pricing engines, quotation workflows, commission systems, customer lifecycle management, and contract automation.
- Implemented UK utility domain workflows including postcode mapping, supplier pricing structures, and quotation logic for broker and customer operations.
- Engineered a high-performance quote engine optimizing large-scale supplier pricing matrix processing, dynamic utility matching, and real-time quotation workflows for scalable backend operations.
- Integrated Zoho Sign, Aircall, contract generation, ticketing, and payment workflows using APIs, SDKs, and webhooks for automated customer communication and operations.

Debt Recovery Platform - AUC

- Designed and developed a multi-tenant debt recovery platform supporting clients, recovery agents, administrators, and customers through role-based operational workflows.
- Implemented postcode-based customer allocation, commission structures, debt recovery lifecycle management, customer imports, and operational assignment automation.
- Engineered real-time field recovery workflows including site visit management, recovery outcome tracking, payment collection processes, evidence capture, and customer reassignment handling.

TRK Finance Software

- Developed a finance management platform supporting customer onboarding, loan processing, document verification, investor fund allocation, EMI scheduling, repayment tracking, and operational reporting.
- Built backend APIs, financial workflows, automated communications, and database processes supporting large-scale lending operations.

Accounting Management System

- Developed an accounting platform supporting inventory management, supplier purchasing, invoicing, payment reconciliation, customer management, and double-entry bookkeeping operations.
- Implemented journal processing, financial transaction workflows, document management systems, and operational reporting capabilities.

EDUCATION

J.J.C. Education Commerce College, Junagadh,

2021 – 2024

Bachelor of Commerce

- Academic First Rank Award recipient
